## Problem Statement B

### Event Management Dashboard

#### Problem Statement:

Build an event management dashboard where organizers can create and manage events, and users can browse and register for events. The dashboard should include features like event creation, user registration, event listings, and real-time updates on the number of registrations.

#### Key Requirements:

- **Frontend:** Design a responsive dashboard for both organizers and users, with different views based on user roles.
- **Backend:** Implement event management, user authentication, and real-time updates for event registrations.
- **Database:** Store event details, user information, and registration data.
- **Bonus:** Include a notification system to alert users about upcoming events or registration deadlines.
